

HOWE COACHES
GOING RIGHT

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to understand what consumers want and what problems they are facing.

2. Once a market need is identified, the next step is to develop a concept for a product that addresses this need. This often involves brainstorming and sketching out initial ideas.

3. The third step is to create a prototype of the product. This allows the creator to test the product's functionality and gather feedback from potential users.

4. After the prototype is built, the creator typically conducts a small-scale test or pilot run. This helps to identify any issues and make necessary adjustments before moving forward.

5. The final step is to launch the product into the market. This involves marketing, distribution, and ongoing customer support to ensure the product's success.

The first thing I noticed
 when I stepped out of the plane
 was the smell of the sea.
 It was a salty, sweet, and
 familiar scent that I had
 never before. It was the
 smell of home.
